BENCHMARK REPORT
MATHEMATICS GRADE 8

ARCHDIOCESE OF CHICAGO

DOMAIN: Standards for Mathematical Content	
OCS Code:	**Strand: _The Number System (NS)_**
8.SMC.NS.1	**Know that there are numbers that are not rational, and approximate them by rational numbers.**
8.SMC.NS.1.1-1.a	Show that numbers that are not rational are irrational
8.SMC.NS.1.1-2.a	Show that every number has a decimal expansion
8.SMC.NS.1.1-3.a	Show that for rational numbers the decimal expansion repeats eventually
8.SMC.NS.1.1-4.a	Convert a decimal expansion which repeats eventually into a rational number
8.SMC.NS.1.2-1.b	Compare rational approximations of irrational numbers to the size of irrational numbers
8.SMC.NS.1.2-2.b	Locate rational approximations of irrational numbers on a number line diagram
8.SMC.NS.1.2-3.b	Estimate the value of expressions by using rational approximations of irrational numbers
OCS Code:	**Strand: _Expressions and Equations (EE)_**
8.SMC.EE.1	**Work with radicals and integer exponents.**
8.SMC.EE.1.1-1.a	Show that the properties of integer exponents generate equivalent numerical expressions
8.SMC.EE.1.1-2.a	Apply the properties of integer exponents to generate equivalent numerical expressions
8.SMC.EE.1.2-1.b	Use square root symbols to represent solutions to equations of the form $x^2 = p$, where p is a positive rational number
8.SMC.EE.1.2-2.b	Use cube root symbols to represent solutions to equations of the form $x^3 = p$, where p is a positive rational number
8.SMC.EE.1.2-3.b	Evaluate square roots of small perfect squares
8.SMC.EE.1.2-4.b	Evaluate cube roots of small perfect cubes
8.SMC.EE.1.3-1.b	Estimate large or small quantities using numbers expressed in the form of a single digit times a whole-number power of 10
8.SMC.EE.1.3-2.b	Compare large quantities to small quantities expressed in the form of a single digit times a whole-number power of 10
8.SMC.EE.1.4-1.c	Perform operations with numbers expressed in scientific notation
8.SMC.EE.1.4-2.c	Choose units of appropriate size for measurements of large or small quantities using scientific notation
8.SMC.EE.1.4-3.c	Interpret numbers that have been expressed in scientific notation which have been generated by technology
8.SMC.EE.2	**Understand the connections between proportional relationships, lines, and linear equations.**
8.SMC.EE.2.1-1.b	Graph proportional relationships
8.SMC.EE.2.1-2.b	Interpret the unit rate as the slope of a graph showing a proportional relationship
8.SMC.EE.2.1-3.b	Compare two different proportional relationships represented in different ways
8.SMC.EE.2.2-1.b	Use similar triangles to show that the slope m is the same between any two distinct points on a non-vertical line in the coordinate plane
8.SMC.EE.2.2-2.b	Derive the equation y = mx for a line through the origin
8.SMC.EE.2.2-3.b	Derive the equation y = mx + b for a line intercepting the vertical axis at b
8.SMC.EE.3	**Analyze and solve linear equations and pairs of simultaneous linear equations.**
8.SMC.EE.3.3-1.b	Create linear equations in one variable with one solution
8.SMC.EE.3.3-2.b	Create linear equations in one variable with infinitely many solutions
8.SMC.EE.3.3-3.b	Create linear equations in one variable with no solutions
8.SMC.EE.3.3-4.c	Solve linear equations with rational number coefficients
8.SMC.EE.3.4-1.b	Show how solutions to a system of two linear equations in two variables correspond to points of intersection of their graph
8.SMC.EE.3.4-2.b	Solve systems of two linear equations in two variables algebraically
8.SMC.EE.3.4-3.b	Estimate solutions of two linear equations by graphing the equations

Code consists of Grade (K-8),Domain (2-3 character alpha code), Strand (1-3 character alpha code), Standard (1-9),
Benchmark Number (1 or 1-1 and up), and Complexity (a, b, c).

8.SMC.EE.3.4-4.b	Solve simple cases of systems of two linear equations by inspection
8.SMC.EE.3.4-5.c	Solve real world and mathematical problems leading to two linear equations in two variables
OCS Code:	**Strand: *Functions (F)***
8.SMC.F.1	**Define, evaluate, and compare functions.**
8.SMC.F.1.1-1.a	Recognize that a function is a rule that assigns to each input exactly one output
8.SMC.F.1.1-2.a	Relate the graph of a function to the set of ordered pairs consisting of an input and the corresponding output
8.SMC.F.1.2.b	Compare properties of two functions each represented in a different way
8.SMC.F.1.3-1.c	Interpret the equation y = mx + b as defining a linear function, whose graph is a straight line
8.SMC.F.1.3-2.c	Construct examples of functions that are not linear
8.SMC.F.2	**Use functions to model relationships between quantities.**
8.SMC.F.2.1-1.b	Construct a function to model a linear relationship between two quantities
8.SMC.F.2.1-2.b	Determine the rate of change and initial value of the function from a description of a relationship
8.SMC.F.2.1-3.b	Determine the rate of change and initial value of the function from two (x, y) values
8.SMC.F.2.1-4.b	Interpret the rate of change and initial value of a linear function in terms of the situation it models
8.SMC.F.2.1-5.b	Interpret the rate of change and initial value of a linear function in terms of its graph
8.SMC.F.2.1-6.b	Interpret the rate of change and initial value of a linear function in terms of a table of values
8.SMC.F.2.2-1.c	Describe qualitatively the functional relationship between two quantities by analyzing a graph
8.SMC.F.2.2-2.c	Graph the qualitative features of a function that has been described verbally
OCS Code:	**Strand: *Geometry (G)***
8.SMC.G.1	**Understand congruence and similarity using physical models, transparencies, or geometry software.**
8.SMC.G.1.1-1.b	Verify experimentally the properties of rotations, reflections, and translations, when lines are taken to lines
8.SMC.G.1.1-2.b	Verify experimentally the properties of rotations, reflections, and translations, when line segments are taken to line segments of the same length
8.SMC.G.1.1-3.b	Verify experimentally the properties of rotations, reflections, and translations, when angles are taken to angles of the same measure
8.SMC.G.1.1-4.b	Verify experimentally the properties of rotations, reflections, and translations, when parallel lines are taken to parallel lines
8.SMC.G.1.2-1.b	Show that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations
8.SMC.G.1.2-2.b	Describe a sequence that exhibits the congruence between two congruent figures
8.SMC.G.1.3-1.b	Describe the effect of dilations on two-dimensional figures using coordinates
8.SMC.G.1.3-2.b	Describe the effect of translations on two-dimensional figures using coordinates
8.SMC.G.1.3-3.b	Describe the effect of rotations on two-dimensional figures using coordinates
8.SMC.G.1.3-4.b	Describe the effect of reflections on two-dimensional figures using coordinates
8.SMC.G.1.4-1.b	Relate one two-dimensional figure as similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations
8.SMC.G.1.4-2.b	Describe a sequence that exhibits the similarity between two similar two-dimensional figures
8.SMC.G.1.5-1.c	State informal arguments to establish facts about the angle sum of triangles
8.SMC.G.1.5-2.c	State informal arguments to establish facts about the exterior angle of triangles

Code consists of Grade (K-8),Domain (2-3 character alpha code), Strand (1-3 character alpha code), Standard (1-9), Benchmark Number (1 or 1-1 and up), and Complexity (a, b, c).

2 of 4

8.SMC.G.1.5-3.c	State informal arguments to establish facts about the angles created when parallel lines are cut by a transversal
8.SMC.G.1.5-4.c	State informal arguments to establish facts about the angle-angle criterion for similarity of triangles
8.SMC.G.2	**Understand and apply the Pythagorean Theorem.**
8.SMC.G.2.1-1.b	Explain a proof of the Pythagorean Theorem
8.SMC.G.2.1-2.b	Explain a proof of the converse of the Pythagorean Theorem
8.SMC.G.2.2-1.c	Solve real world and mathematical problems in two dimensions using the Pythagorean Theorem to determine unknown side lengths in right triangles
8.SMC.G.2.2-2.c	Solve real world and mathematical problems in three dimensions using the Pythagorean Theorem to determine unknown side lengths in right triangles
8.SMC.G.2.3.c	Find the distance between two points in a coordinate system using the Pythagorean Theorem
8.SMC.G.3	**Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres.**
8.SMC.G.3.1-1.b	Solve real world and mathematical problems using the formula for the volume of cones
8.SMC.G.3.1-2.b	Solve real world and mathematical problems using the formula for the volume of cylinders
8.SMC.G.3.1-3.b	Solve real world and mathematical problems using the formula for the volume of spheres
OCS Code:	**Strand: *Statistics and Probability (SP)***
8.SMC.SP.1	**Investigate patterns of association in bivariate data.**
8.SMC.SP.1.1-1.a	Construct scatter plots for bivariate measurement data
8.SMC.SP.1.1-2.a	Analyze patterns of association between two quantities on a scatter plot of bivariate measurement data
8.SMC.SP.1.2-1.b	Assess the proximity of data points to a line on a scatter plot in order to determine its linear association
8.SMC.SP.1.2-2.b	Assess the model fit to a line on a scatter plot by judging the closeness of the data points to a line
8.SMC.SP.1.3.b	Solve problems by interpreting the slope and intercept of bivariate measurement data by using the equation of a linear model
8.SMC.SP.1.4-1.c	Analyze patterns of association of categorical data displayed in a two-way frequency and relative frequency table
8.SMC.SP.1.4-2.c	Construct a two-way table summarizing data on two categorical variables collected from the same subjects
8.SMC.SP.1.4-3.c	Analyze summary data from a two-way frequency table to describe the association between two categorical variables
**DOMAIN: Standards for Mathematical Practices**
OCS Code:	**Strand: *Solve Problems (MP1)***
8.SMP.1	**1. Make sense of problems and persevere in solving them.**
8.SMP.1.c	Make sense of problems and persevere in solving them
OCS Code:	**Strand: *Reason (MP2)***
8.SMP.2	**2. Reason abstractly and quantitatively.**
8.SMP.2.c	Reason abstractly and quantitatively
OCS Code:	**Strand: *Construct Arguments (MP3)***
8.SMP.3	**3. Construct viable arguments and critique the reasoning of others.**
8.SMP.3.c	Construct viable arguments and critique the reasoning of others
OCS Code:	**Strand: *Model (MP4)***
8.SMP.4	**4. Model with mathematics.**
8.SMP.4.c	Model with mathematics

BENCHMARK REPORT
MATHEMATICS GRADE 8

ARCHDIOCESE OF CHICAGO

OCS Code:	Strand: *Use Tools (MP5)*
8.SMP.5	**5. Use appropriate tools strategically.**
8.SMP.5.c	Use appropriate tools strategically
OCS Code:	**Strand: *Attend to Precision (MP6)***
8.SMP.6	**6. Attend to precision.**
8.SMP.6.c	Attend to precision
OCS Code:	**Strand: *Use Structure (MP7)***
8.SMP.7	**7. Look for and make use of structure.**
8.SMP.7.c	Look for and make use of structure
OCS Code:	**Strand: *Express Regularity (MP8)***
8.SMP.8	**8. Look for and express regularity in repeated reasoning.**
8.SMP.8.c	Look for and express regularity in repeated reasoning

Code consists of Grade (K-8),Domain (2-3 character alpha code), Strand (1-3 character alpha code), Standard (1-9), Benchmark Number (1 or 1-1 and up), and Complexity (a, b, c).
